

The Programmatic (R)evolution

Causes, Effects & a Framework to thrive in it!

A **revolution** (from the Latin *revolutio*, "a turn around") is a fundamental **change** in **power** or **organizational structures** that takes place in a relatively **short period of time**.

The market stakeholders

- › Large **international players** have emerged
 - › Global Internet media companies
 - › Global Advertising Agency Groups
- › These international entities are **ideal trading partners** because of their **size** and **offer** and have **disrupted local** traditional media companies
- › Emergence of smaller agencies & publishers increases **fragmentation**
- › **Display** advertising budgets are **on the rise** globally although not still commanding the proper share based on Display SOV
- › But local publishers don't necessarily follow this trend

The technology evolution

- › New technologies coming of age
 - › **RTB**
 - › **Big Data**
 - › Viewability / Visibility
- › Global **technology & infrastructure providers** have emerged
- › **Programmatic trading** is rapidly growing globally
 - › Adopted by large global media companies
 - › Embraced by medium – small advertisers
 - › Strategically selected by big agency groups
- › All the major global players are building **centralized technology capabilities**
- › The digitization of traditional media (TV, radio, outdoor) has already begun

Connecting the dots
the causes of the revolution

Ingredients for a (R)evolution

› **Technology!!!**

- › Globalization of Digital Marketing ecosystem
- › Fully connected – two way communication
- › Capacity for personalized messaging
- › Potential for Automation

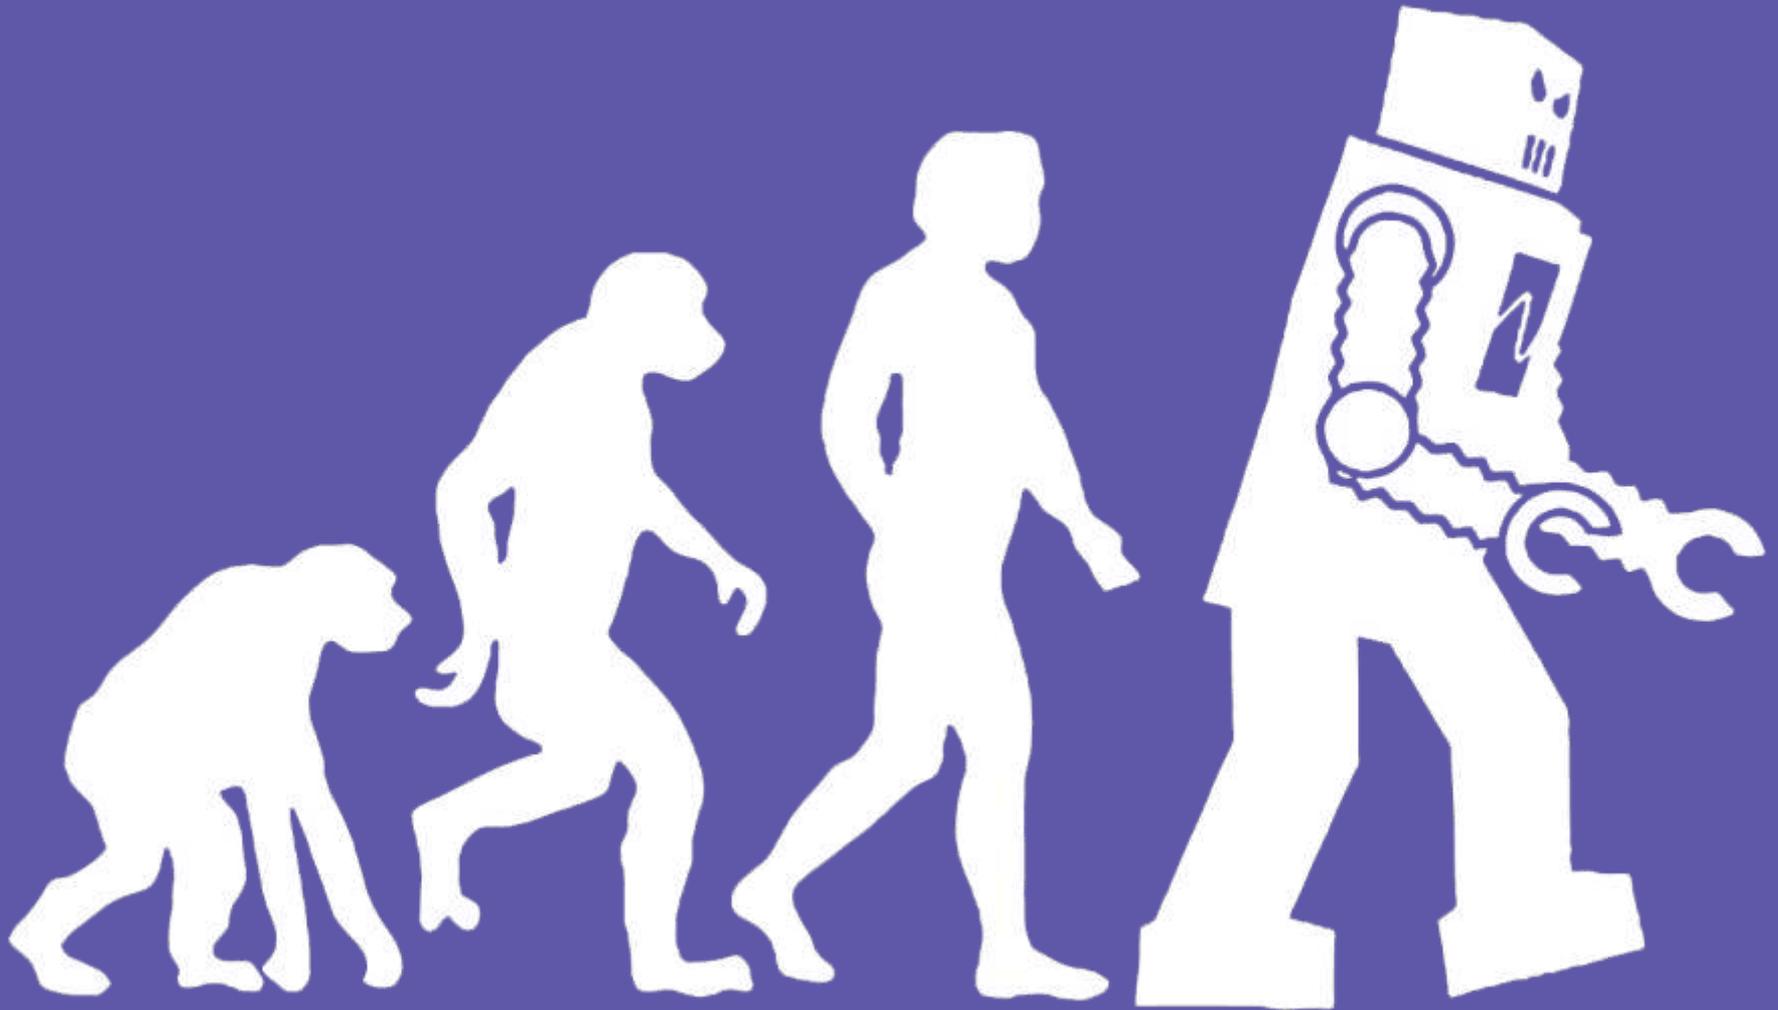

› **Data Data Data** (aka Big Data)

- › Emergence of **Global Internet Media Giants**
- › Global consolidation of **Agency groups**
- › Lower barriers to entry – smaller players
- › A disruption – **programmatic Ad trading**

Vive la (R)evolution!

Programmatic clarified & explained...

Let's start with a definition

“Programmatic buying is the **process** of executing **media buys** in an **automated** fashion through **digital platforms** such as: exchanges, trading desks, demand-side platforms (DSPs) and supply-side platforms (SSPs).

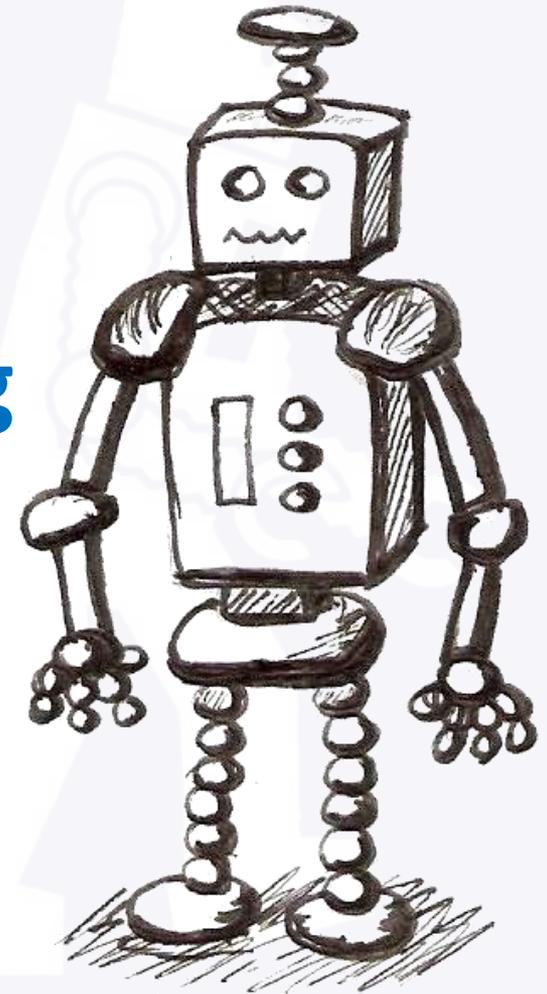

This method replaces the traditional use of manual RFPs [Requests For Proposal], negotiations and insertion orders to purchase digital media.”

(Business Insider, September 2012)

The Core Revolution:

Automation

of media buying and selling
(through technology)

The protocol for automation is called

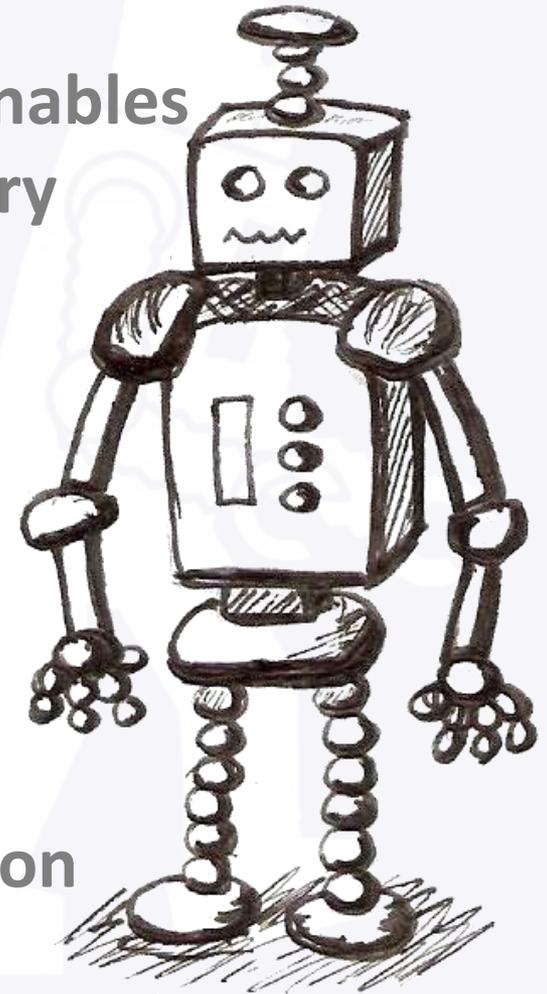

RTB = Real Time Bidding

An online advertising technology that enables you to trade display advertising inventory

- impression-by-impression
- in real-time
- on an auction basis

& Data

Affecting the valuation of each impression

The underlying evolution

From Media Planning

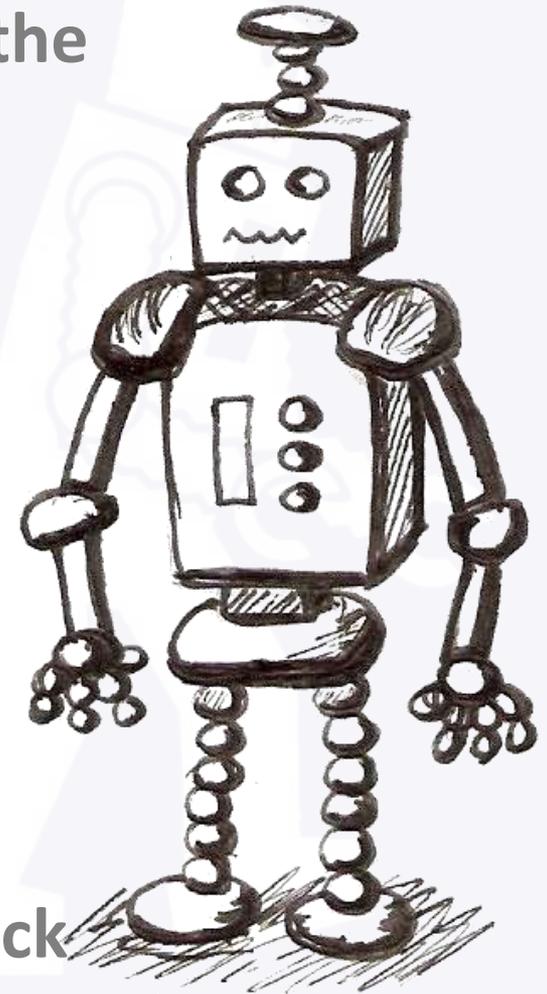

Attempt to reach the right person with the right message at the right time

- Using historical information
- Buying in bulk
- Post Campaign Evaluation

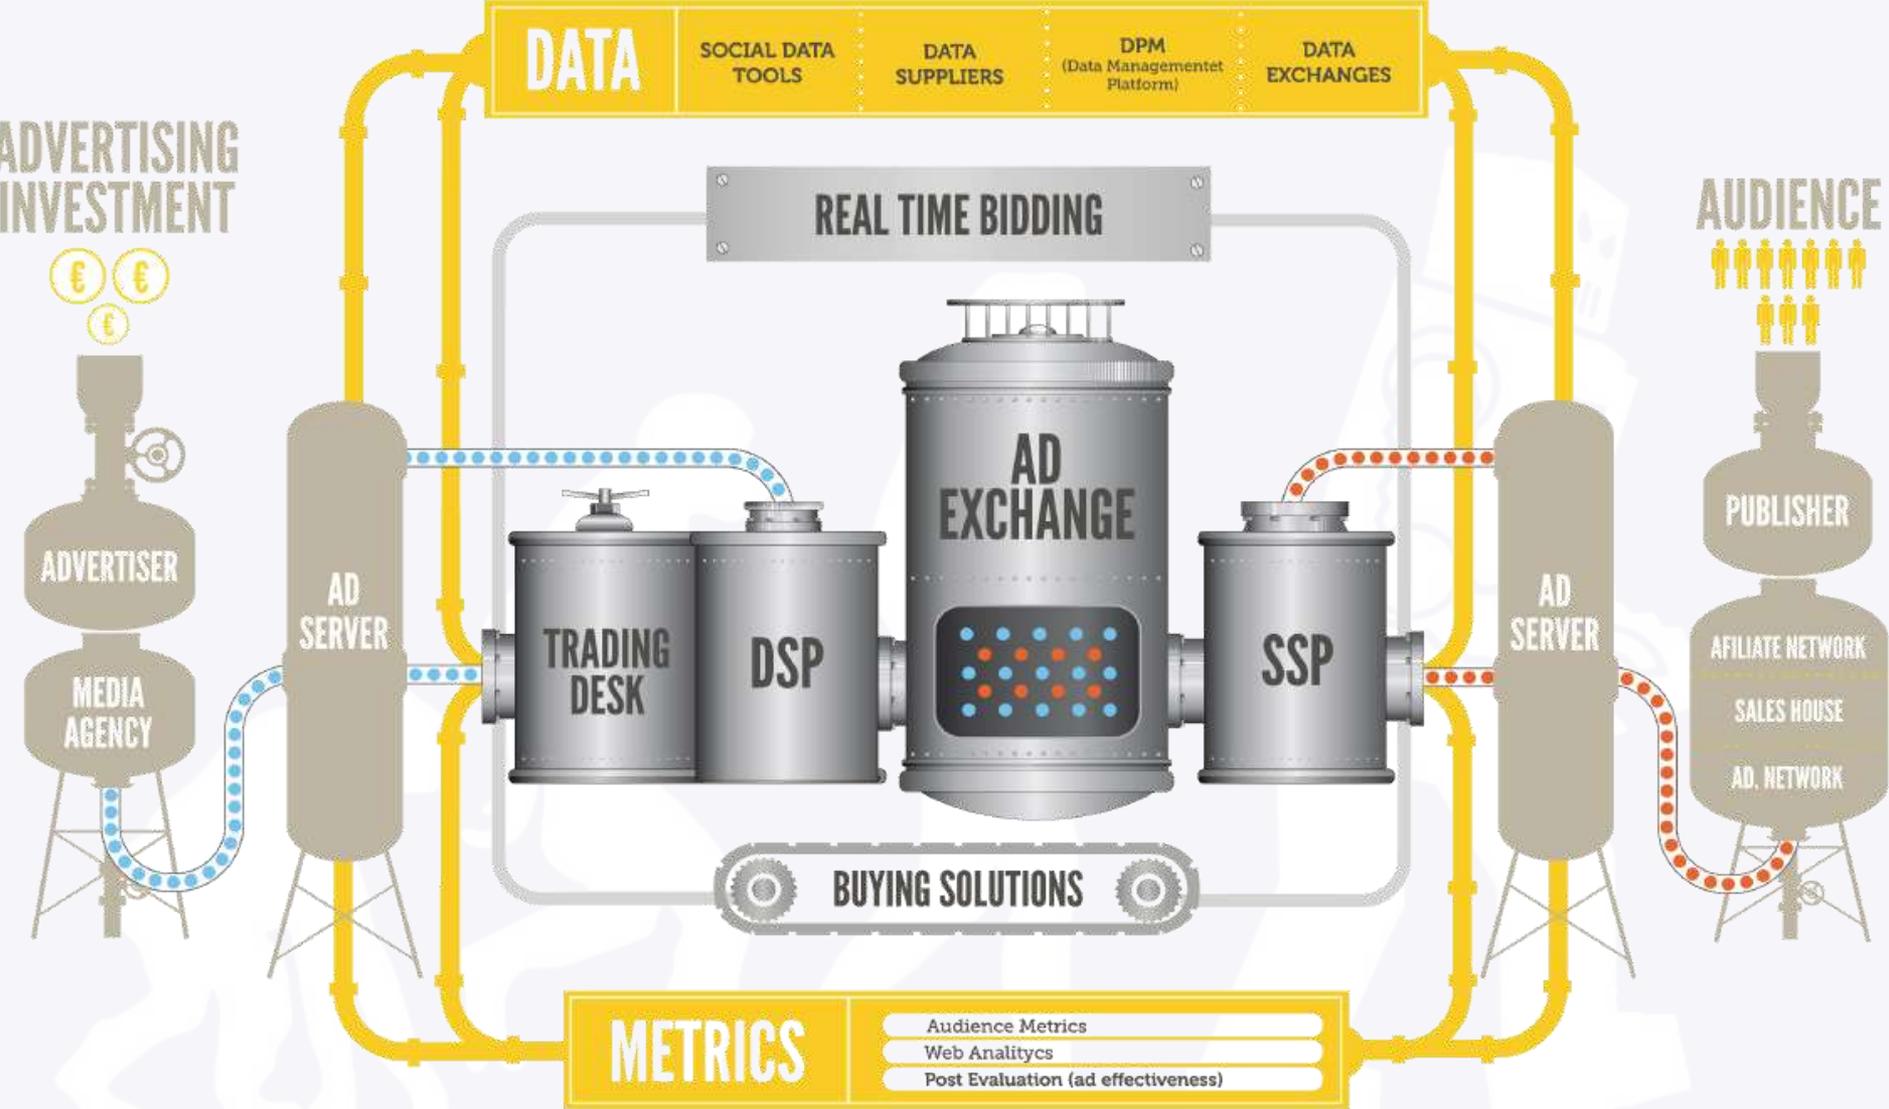

To Audience Planning

Evaluate each impression in real time against the desired audience profile

- Using real time information
- Post impression evaluation & feedback

PROGRAMMATIC BUYING ECOSYSTEMS

Definitions

- › AdExchange = Online automated marketplace that facilitates the buying and selling of inventory across multiple SSPs and DSPs
- › Demand Side Platform (DSP) = An advertising technology platform which allows marketers to manage their online media campaigns by facilitating the automated buying of display media and audience data across multiple inventory and data suppliers in a centralized management platform.
- › Supply Side Platform (SSP) = An advertising technology platform which enables the suppliers of online ads (Publishers) to offer their inventory through AdExchange(s)
- › Real Time Bidding (RTB) = It's a technology protocol facilitating one of the possible automated trading mechanisms – a real time auction. For the time being it's the prevailing mechanism to accomplish automated trading and as such it's commonly used in place of the more general term Programmatic. In reality RTB is part of Programmatic.
- › Data Management Platform (DMP) = a unified technology platform that intakes disparate first-, second-, and third-party data sets, provides normalization and segmentation on that data, and allows a user to push the resulting segmentation into live interactive channel environments for private use and / or monetization.

(R)evolution effects
The wind of Change

The (R)evolution effects

› New Business Opportunities

- › Re-evaluate current business models & **enhance** them with automation & Data
- › Introduce **new business models** (e.g. private marketplace, audience extension)
- › More monetization channels available – must work together and not against each other
- › **Local Publisher Alliances** – an answer to the global market dynamics

› Organizational challenges

- › Re structure according to the evolving skillsets needed
- › Select your **technology partners**

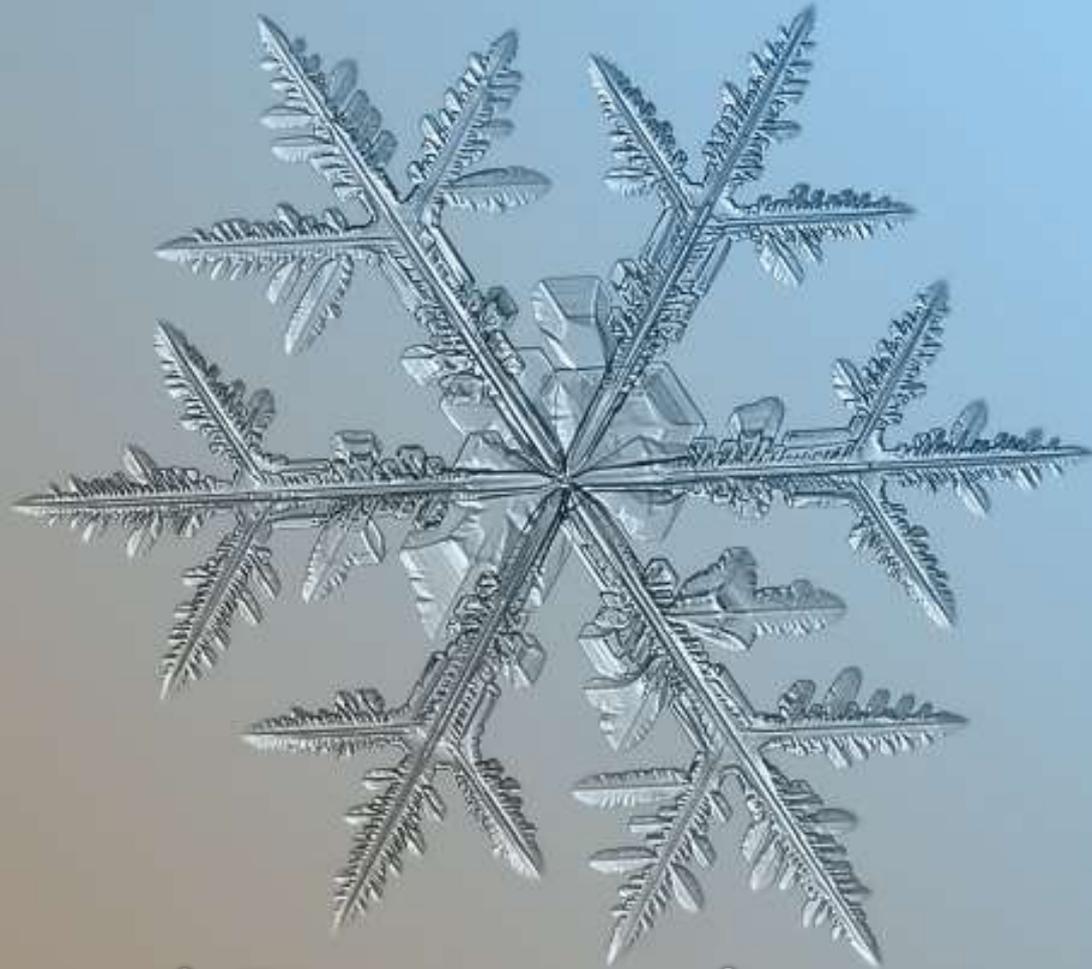

› The Data conundrum

- › What data do I own / can collect?
- › How do I use them?

› Change & Evolve

- › It's never easy
- › It's unavoidable
- › It's not replacing everything

Final thoughts

- › The **Programmatic (R)evolution** is already here & you can't afford to let it continue without you!
- › It's **technology disrupting** our **traditional business models** as has happened before in other domains (e.g. airlines, hotels etc.)
- › It's **not making humans redundant**, it's automating trivial tasks freeing up more time for **creativity**
- › Use the **framework** to structure your approach
- › **Don't reinvent the wheel** – use it to build value
- › Be an active player!

Thank You!
